Agenda

- Available editing components
- Editor (new features)
  - Selection
  - Batch editing
  - Split / Merge
  - True curve support
- FeatureTable (new features)
  - Attachments
  - Contingent values support
  - Disable auto-save
- SelectionManager
- Custom editing workflows
- Roadmap

Available editing components

Available editing components

Attachments	<arcgis-feature-attachments />*
Editor	<arcgis-editor />
FeatureForm	<arcgis-feature-form />
FeatureTable	<arcgis-feature-table />
FeatureTemplates	<arcgis-feature-templates />
SnappingControls	<arcgis-snapping-controls />

UtilityNetworkAssociations	<arcgis-utility-network-associations />

* development in progress

ArcGIS Maps SDK for JavaScript: Building Utility Network Applications

LIVE IN 5 DAY(S)

Wednesday, Mar 11 | 2:30 PM - 3:30 PM PDT | Primrose C | PSCC

ADD TO SCHEDULE *ADD TO FAVORITES*

ADD TO SCHEDULE **Wednesday, Mar 11 | 2:30 PM - 3:30 PM PDT | Primrose C | PSCC** Session is available 5 minutes before start time

Esri's next-generation network technology, the utility network, is completely based on web services, which makes it ideally suited for building web applications. Are you ready to move beyond the desktop and develop browser-based applications for your user community? This technical session covers the growing utility network capabilities using the ArcGIS Maps SDK for JavaScript. Speakers will discuss editing, visualizing, and tracing utility networks in a web browser.

SPEAKERS

Benjamin Denzler
Esri

Rich Ruh
Esri

Session Type: Technical Session

Session Level: Intermediate

Access Type: In-Person, Recorded, Live stream

Topic: Data Management

Esri Products: ArcGIS Utility Network, ArcGIS Maps SDK for JavaScript

Capabilities: Data Management, Data Visualization, Extending ArcGIS, Web GIS

Technologies: JavaScript

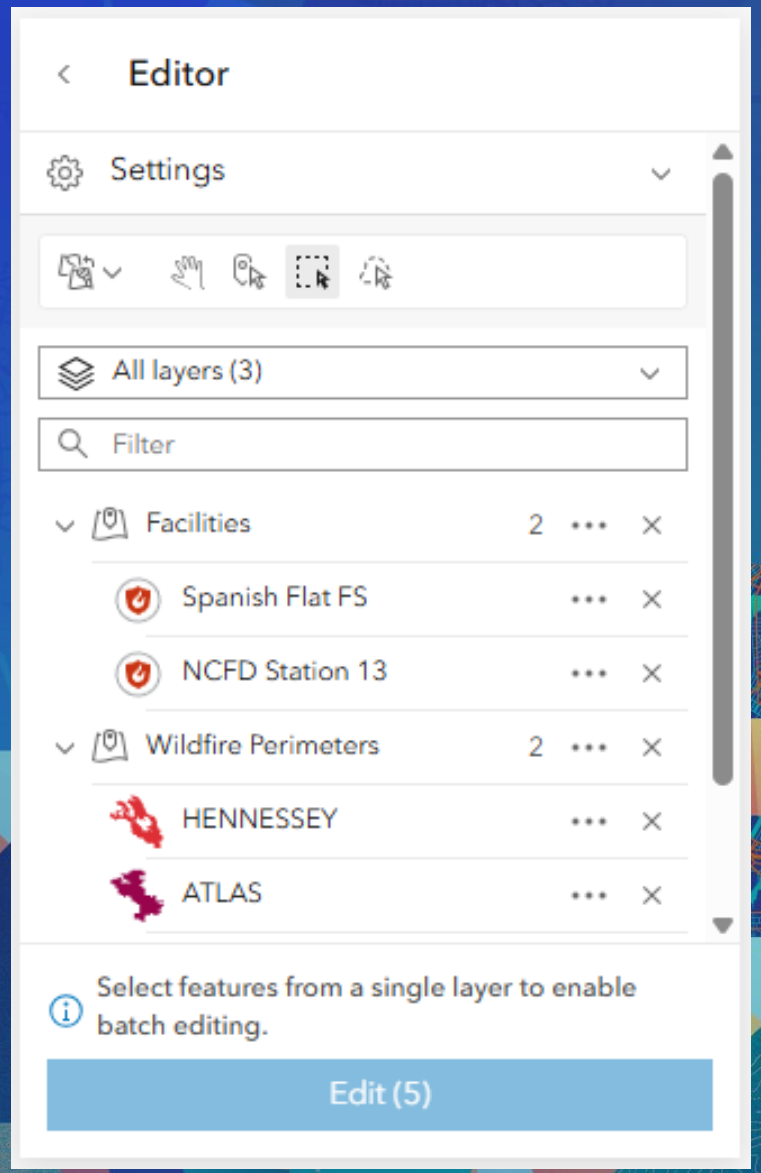

Keywords: geodatabase, utility network, trace

Editor (new features)

Selection

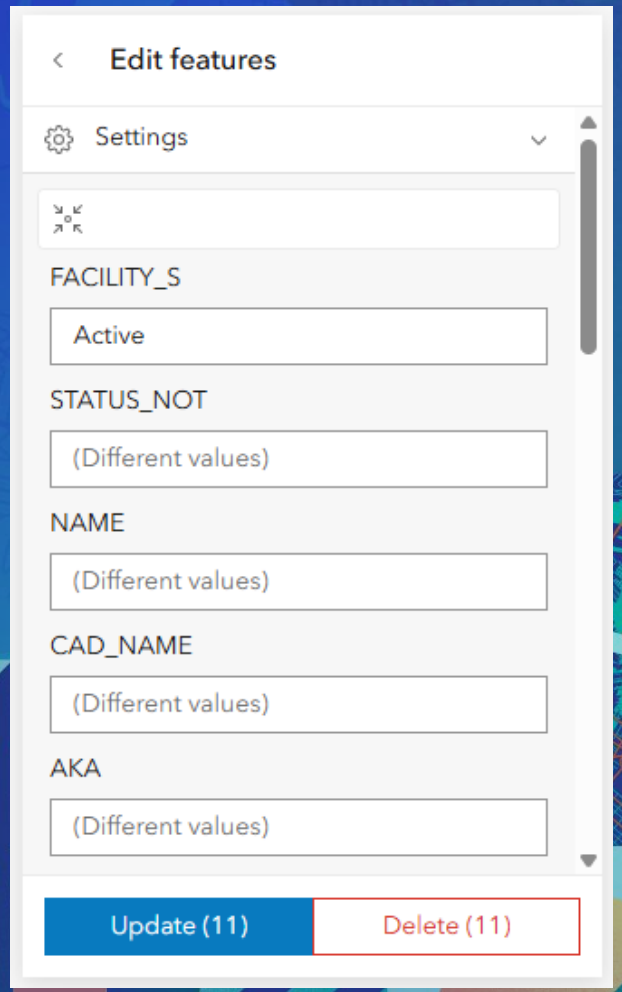

- Batch selecting features for single or multiple layers
- Further refine selection by:
  - Filtering selection by layer
  - Filtering by feature title
- Can add, remove, or replace existing selections using the toolbar
- Selection is the entry point for single and batch editing mode

Demo: Editor Selection

Batch Attribute Editing

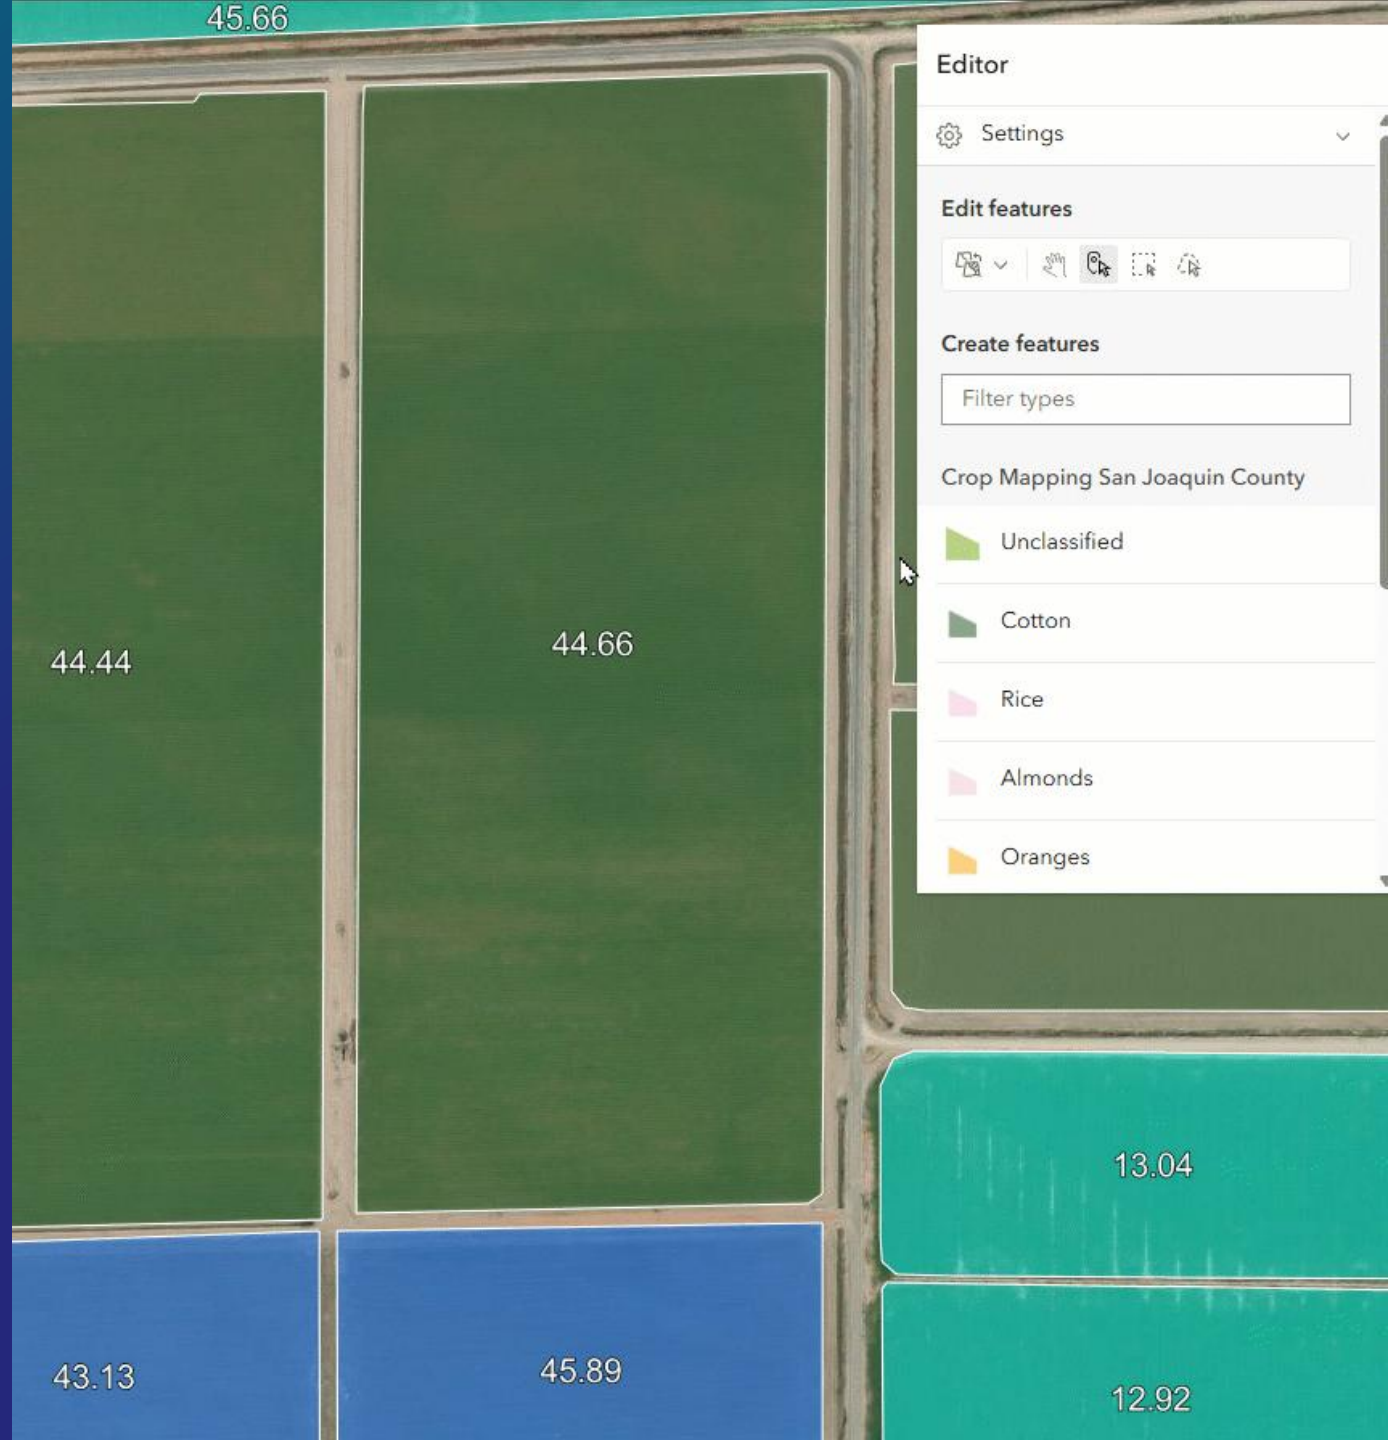

- Support added in June 2025
- Update attribute values for multiple features for the same layer
- startUpdateWorkflowAtMultipleFeatureSelection(Graphic[])
  - To start batch editing in custom workflows
- BatchAttributeForm widget functionality will go to FeatureForm component
- Move is the only allowed geometry update

Demo:
Batch Editing

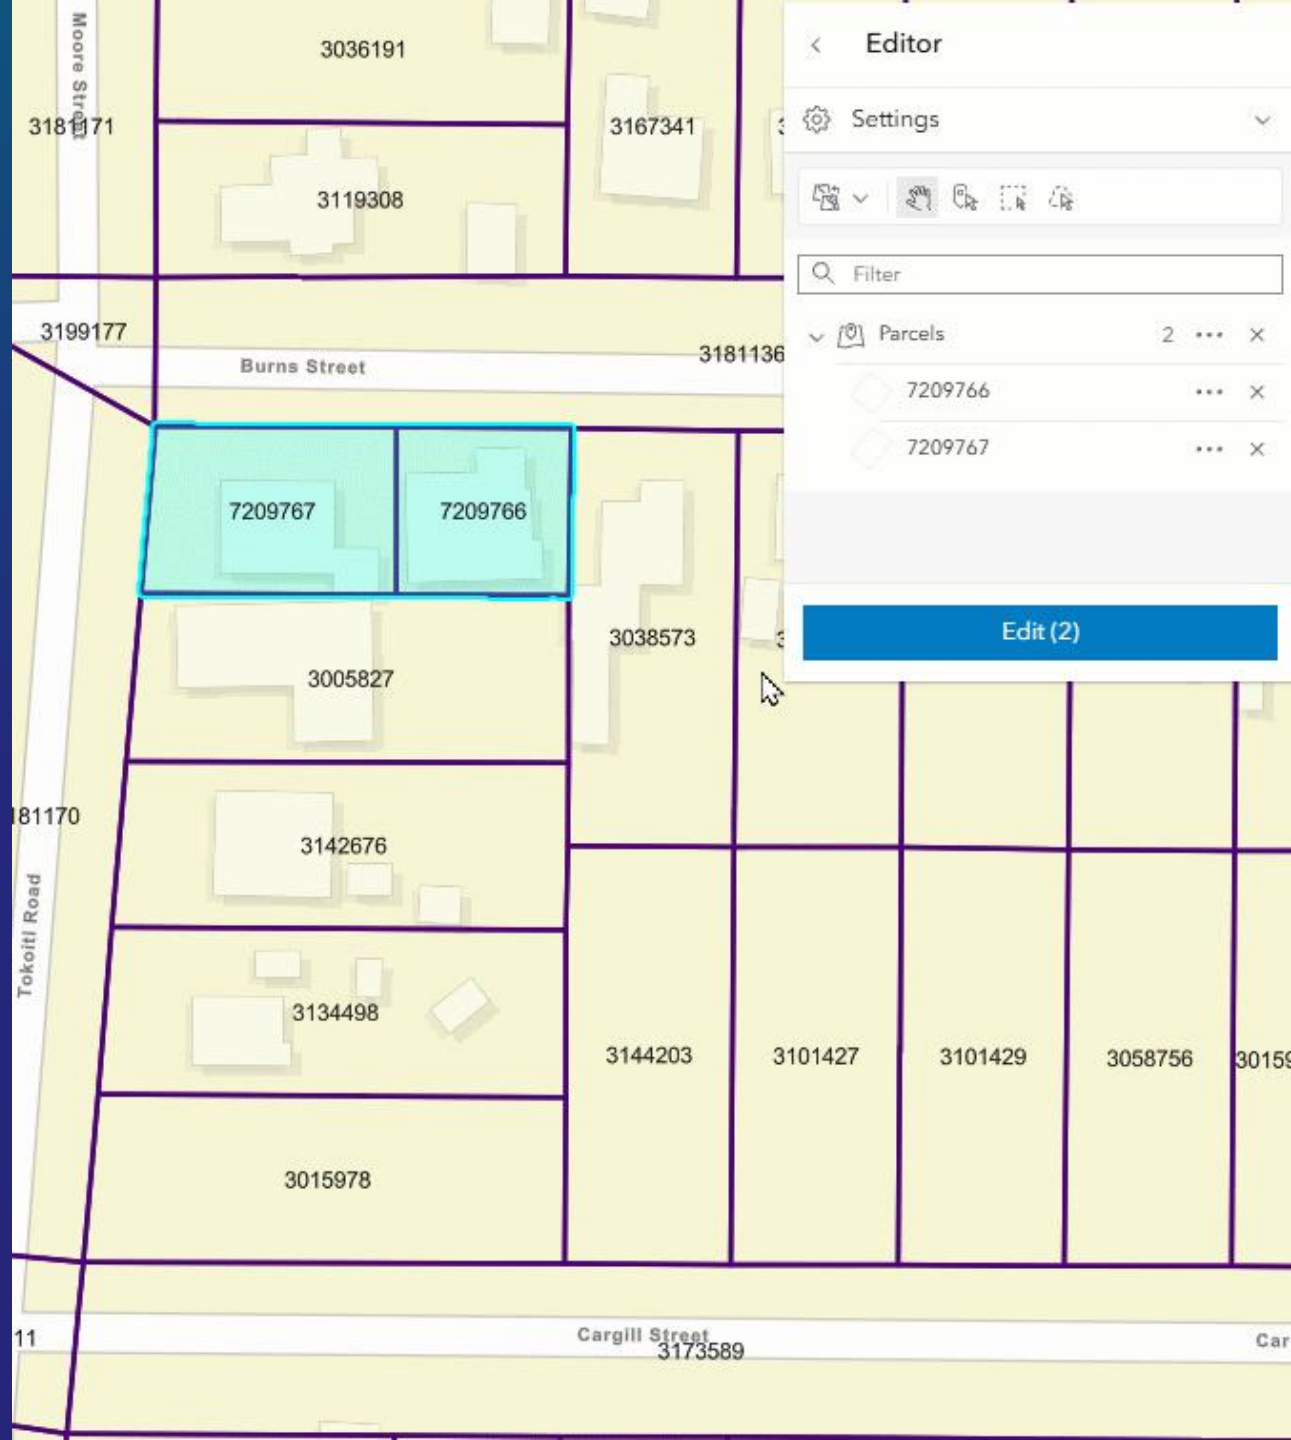

Merge / Split Construction Tools

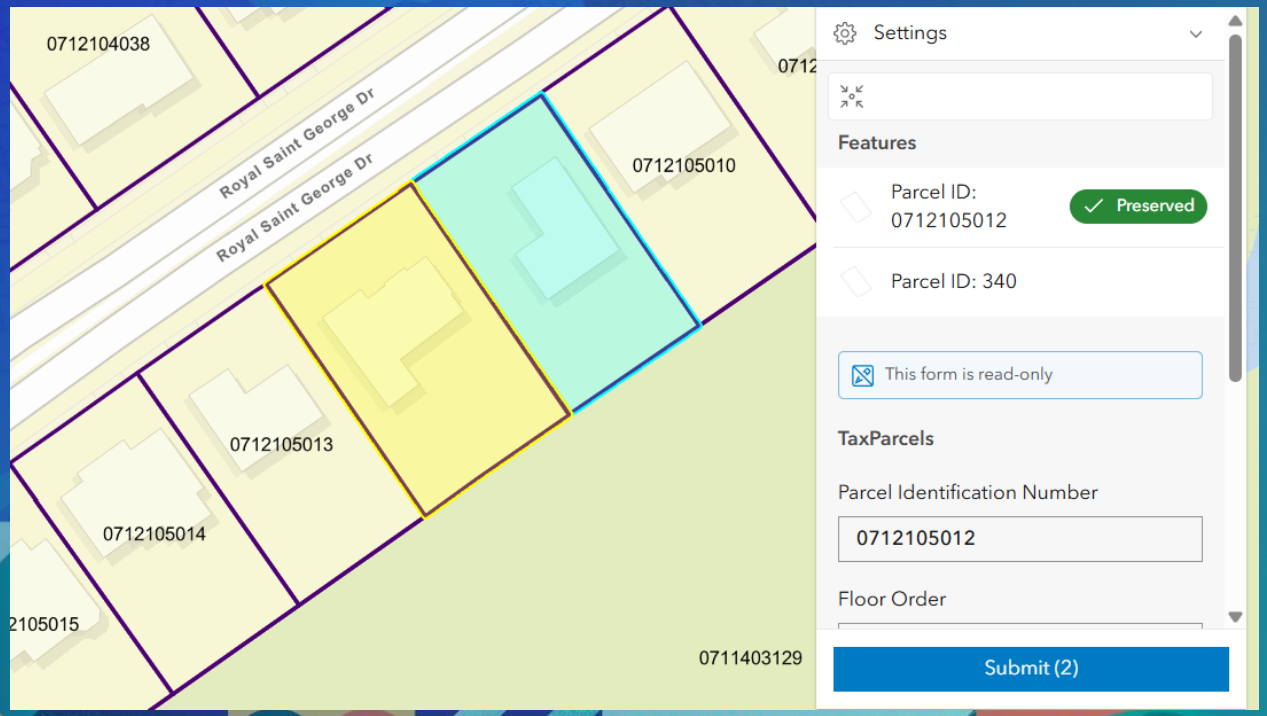

- Split tool divides an existing feature into multiple features
- Can modify the attributes of the new features before submitting the edit
- Supports splitting true curve features, and splitting with curve tools

Merge / Split Construction Tools

- Merge tool combines multiple features into a single feature
- Can merge features from an update workflow
- Can merge features from the selection list
- Choice of which feature's attributes will be preserved in the merge

Demo: Split / Merge

True Curve Editing

- Create, Update, and Delete features with true curves
- Create circular and Bezier curves
- Modify the interior point while creating the curve segments
  - Press ‘v’ key to enter this mode
- Create a circular arc from an existing straight line segment
  - Shift + click + drag on a midpoint vertex manipulator
- Update existing circular and Bezier curved geometries
- Snapping support
- Split operator support
- Arcade support

Demo:
True Curve Editing

Feature Services (FS) Curve Limitations

ArcGIS Online Hosted FS	Enterprise FS (by reference)
• Only supports circular arcs • Non-supported curves will be densified • True curve snapping • Resizing is turned off in Editor • It creates unsupported elliptical arcs	• Supports circular, Bezier, and elliptical arcs • Requires 12.1 for true curve snapping

FeatureTable

What's New?

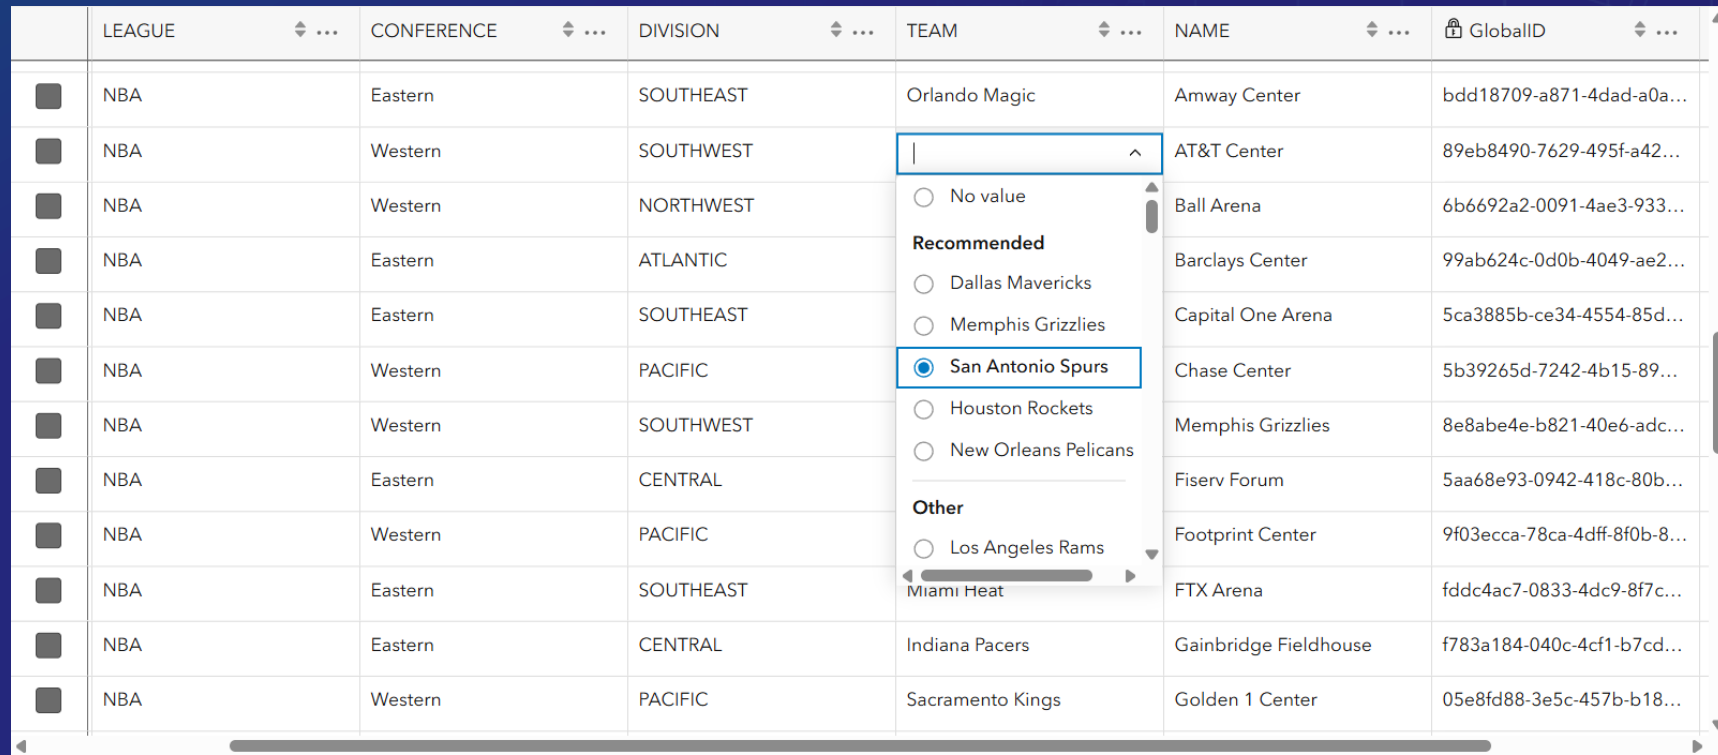

- Support for FeatureLayer FieldConfigurations
  - Layer-level configuration for field aliases, number and date data
- Improved attachment viewing experience
- Editing of contingent values
- Disable auto save editing behavior
  - Allows saving multiple cell-level edits simultaneously
- SelectionManager integration
- Additional customization and column-centric properties

Field Configurations

- Standardized configuration for presenting field information
- Support for alias, date/time and number formats
- Defined in the WebMap Specification
- Has priority over default alias in the field schema
- Currently only supported by FeatureLayer (and tables)
  - Additional layer types planned in a future release
- Accessible via FeatureLayer.fieldConfigurations[]

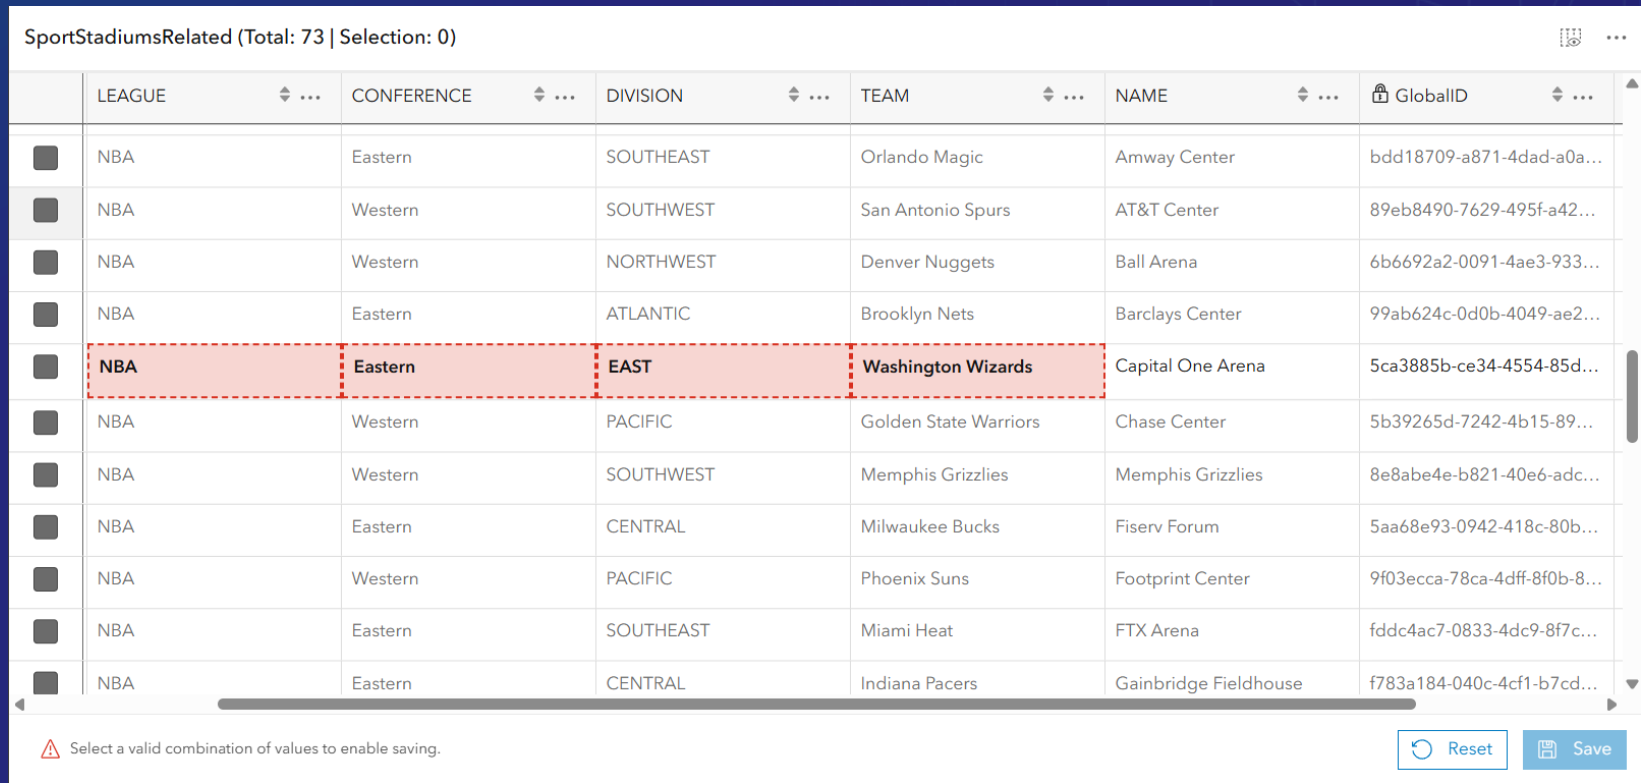

Contingent attribute values

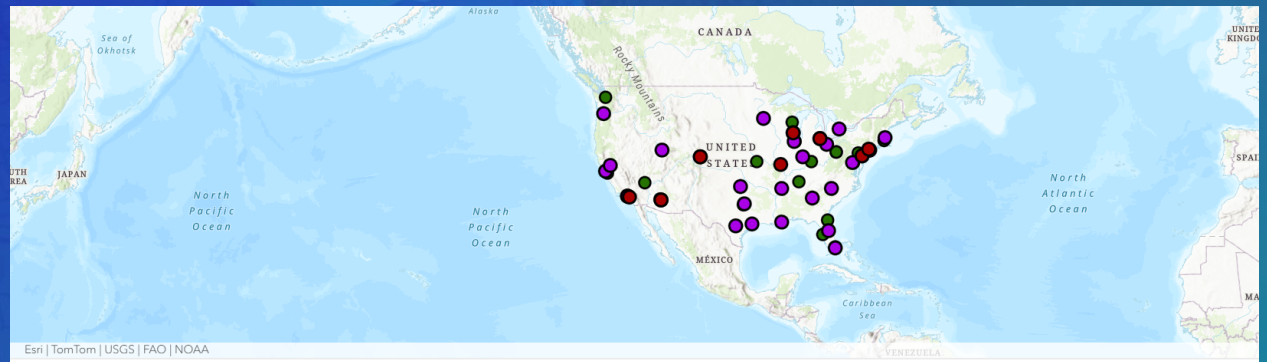

- Displays valid contingent values under the “Recommended” section
- Supports restrictive field groups

Contingent attribute values

- Validation support
- Invalid contingencies are highlighted
- The fields that participate in the field group are highlighted

SportStadiumsCAVs (Total: 71 | Selection: 0)

OBJECTID	LEAGUE	CONFERENCE	DIVISION	TEAM	NAME
2	NFL	NFC	WEST	Los Angeles Rams	Default nfl text
3	NFL	AFC	WEST	Los Angeles Chargers	SoFi Stadium
4	NFL	NFC	WEST	Seattle Seahawks	Lumen Field
5	NFL	NFC	WEST	Arizona Cardinals	State Farm Stadium
6	NFL	NFC	WEST	San Francisco 49er	Levi's Stadium
7	NFL	NFC	SOUTH	New Orleans Saints	Caesars Superdome
8	NFL	NFC	SOUTH	Tampa Bay Buccaneers	Raymond James Stadium

Demo: Contingent Values

Disabling automatic save and pending edits

- Allows editing multiple cells without saving after each individual edit
- Edits can be reviewed, and sent in a single 'applyEdits' call
- Properties
  - autoSaveDisabled: boolean;
  - hasPendingEdits: boolean;
  - hasInvalidPendingEdits: boolean;
    - Currently exclusive to contingent value workflow

- Methods
  - addPendingEdits(edits: FeatureStoreEdits): void;
  - discardPendingEdits(edits?: FeatureStoreEdits, showWarningPrompt): Promise<void>;
  - savePendingEdits(): Promise<void>;

SelectionManager

SelectionManager

- Works with all layers that support Object IDs and GraphicsLayer
- Works with layers and leverages
- Available on MapView and SceneView out-of-the-box with no set up required
- Leverages LayerViews for highlights automatically
- Integration with Editor, FeatureTable and Charts
  - Support for custom app level SelectionManager

SelectionManager Concepts

- Sources
  - Layers to track the selection for
  - View automatically syncs sources on construction
  - Sources must be synced when new layers are added to the view
- SelectionIdentifier
  - ObjectId or Graphic

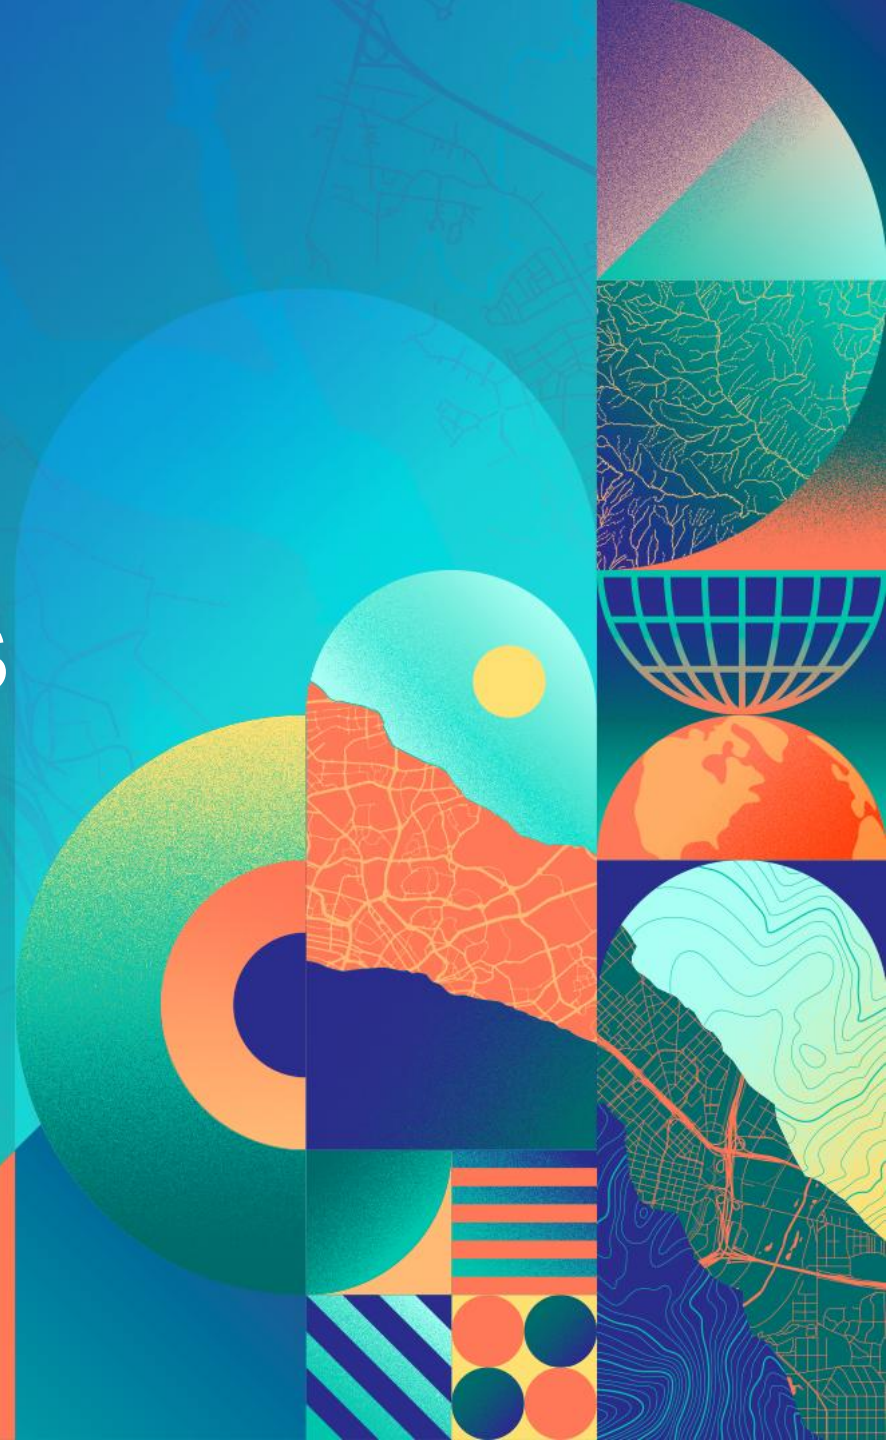

SelectionManager Integration

- Information
  - readonly count(): number;
  - readonly hasSelection(): boolean;
  - highlightEnabled(): boolean;
  - readonly sources(): Collection<SelectableLayer>;
- Modification
  - .add(layer, selection): void;
  - .remove(layer, selection): void;
  - .replace(layer, selection): void;
  - .toggle(layer, selection): void;
  - .clear(): void;

SelectionManager Integration

- Additional Information
  - .selections: LayerSelection[];
  - .getSelection(layer): SelectionIdentifier[];
    - Returns the selection as is without additional Query
  - .getSelectedFeatures(layers, queryParams, queryTarget): Promise<LayerFeatureSet[]>;
    - Query the layer or layer view for Graphics representing the selection
- Utility
  - .syncSources(): void;
  - .sources.add(layer);
  - .sources = new Collection<SelectableLayer>();
  - .sources = [...layers]; // Autocast for convenience

Custom Editing Workflows

Roadmap

Editing Roadmap

ArcGIS Online February 2026 Enterprise 12.1

- Multi-tool drawing
- Curve drawing
- Curve editing
- Curve snapping
- FeatureTable contingent values support
- FeatureTable improved attachment viewing experience
- SelectionManager

Near Term

- New construction tools
  - Reshape
  - Auto-complete
  - Trace / follow
- Curve drawing constraints (radius)
- Multi-part geometry creation support
- Attachment element support in the form
- SelectionList and SelectionToolbar components
- Z-snap support

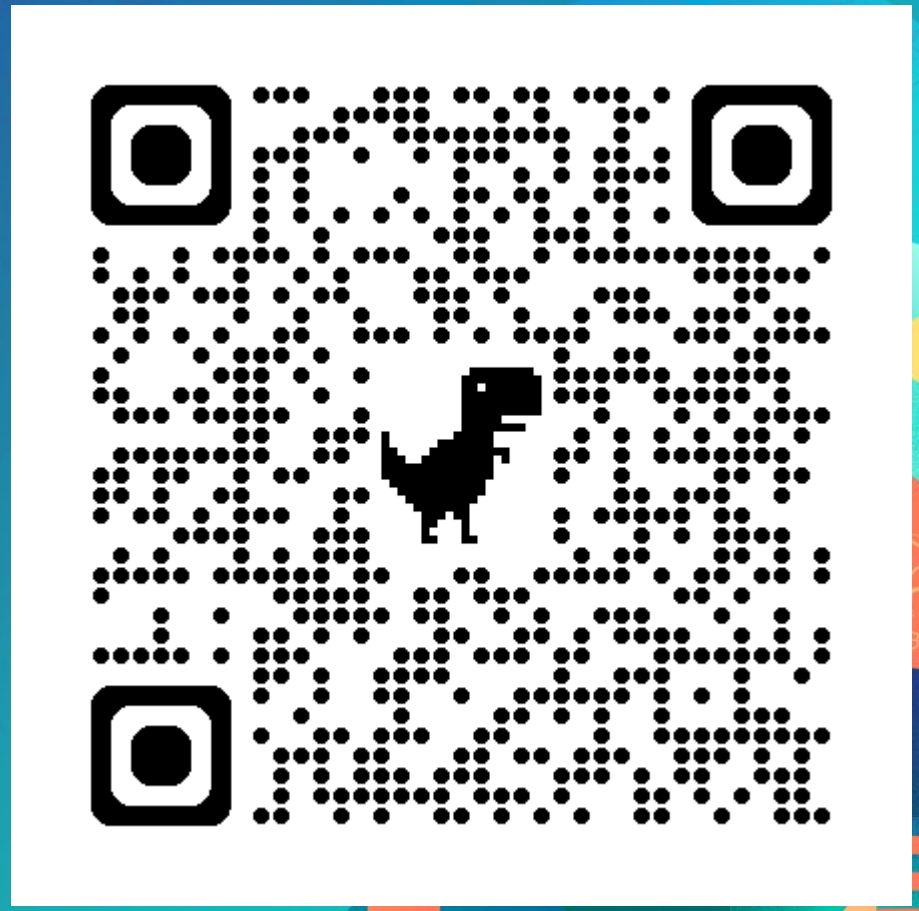

Long Term

- Dimension support (starting with display)
- Annotations (display)
- Batch attribute feature creation
- KnowledgeGraphSublayer editing
- Shared edge editing
- Client-side topology
- Fully accessible drawing tools
- Multiple choice form element

Questions

Slides and demos

Share your feedback on Map components in the JavaScript Maps SDK

And get Esri swag!

- 30-minute feedback sessions with our User Research team on Wednesday and Thursday
- No need to prepare anything
- Schedule your session today!
